INVESTOR EXPECTATIONS ON CLIMATE CHANGE FOR AIRLINES AND AEROSPACE COMPANIES

February 2020

As long-term investors, we recognize the threat of climate change to our investments and view fulfillment of the Paris Agreement’s goal to hold global average temperature rise to “well below 2°C above preindustrial levels” as an imperative. Aviation is a carbon-intensive mode of transportation and is projected to grow rapidly in the 21st century. While this presents opportunities for aviation investors and companies, the accompanying increase in greenhouse emissions also heightens climate change-related risks. These include:

- **Transition Risks:**
  - **Regulatory:** Although current company, government, and voluntary industry-wide emissions targets are welcome, they will not align the sector with the net-zero world envisioned by the Paris Agreement. As a result, governments are likely to impose stronger emissions reduction measures on airlines and aerospace companies as the gap between the level of action needed to keep global warming to safe levels becomes more apparent.
  - **Reputational:** Airlines and aerospace companies may face a backlash from their consumers, investors, or other stakeholders if they, or the organizations they support, are perceived to be making insufficient efforts to reduce their emissions. The recent growth of the no-fly movements in Europe demonstrate that this is a risk that aviation companies are already confronting.
  - **Legal:** Airlines and aerospace companies could face growing legal risks as legal notions of company responsibility for climate change evolve. As just one example, some oil and gas majors have already faced lawsuits alleging that they misled investors and the public on climate change, despite knowing the legal notions of company responsibility for climate change evolve. As just one example, some oil and gas majors have already faced lawsuits alleging that they misled investors and the public on climate change, despite knowing the risks.

- **Physical risks:** Airline and aerospace companies that are unprepared for the projected physical impacts of climate change—including everything from airport flooding to increases in clear-air turbulence—could face severe consequences to assets, service and overall viability.

We have developed the investor expectations below as guiding standards to support airline and aerospace companies in managing climate-related risks and proactively positioning themselves for the transition to a low-carbon economy. We view these actions as vital to those with a fiduciary responsibility for other people’s long-term investments and support their implementation.

Produced by the United Nations-supported Principles for Responsible Investment (PRI), with input from investors engaging airlines and aerospace companies via the Climate Action 100+.  

2. E.g., efficiency and CO₂ targets set by the International Civil Aviation Organization (ICAO), International Air Transport Association (IATA), and the Air Transport Action Group (ATAG). This includes the Carbon Offsetting and Reduction Scheme for International Aviation (CORSIA).

INVESTOR EXPECTATIONS:

As long-term institutional investors, we expect airlines and aerospace companies to:

1. Implement a strong governance framework which clearly articulates the board's accountability and oversight of climate change risks and opportunities. This should entail:
   - Nominating a board member or board committee with explicit responsibility for oversight of the climate change policy; and
   - Incorporating climate change risks and opportunities into company strategy.

2. Establish and disclose robust transition plans consistent with the goals of the Paris Agreement. These should:
   - Include short-, medium-, and long-term targets and timelines for reaching net-zero emissions by 2050;
   - Cover emissions reductions throughout the value chain (Scope 1, 2, and 3);
   - Not rely solely on carbon offsets or alignment with current government and voluntary industry-wide targets aimed at addressing aviation emissions; and
   - Conduct scenario analyses to assess the robustness of company business plans against a range of climate scenarios, including a 1.5°C global warming scenario.

3. Establish and disclose robust strategies, resources, and programs for:
   - The development, use, scaling, and commercialization of sustainable alternative aviation fuels and technologies with substantially lower carbon emissions relative to conventional aviation fuels; and
   - Operational and technical efficiency improvements (recognizing that efficiency improvements alone will not guarantee absolute emissions reductions in the future).

4. Provide strong corporate disclosure in line with the final recommendations of the Task Force on Climate-related Financial Disclosures (TCFD).

5. Lobby transparently and consistently with the Paris Agreement.

In accordance with investor expectations statements on climate change lobbying set out by the PRI, IIGCC, and Ceres, this means:

- lobbying consistently with the Paris Agreement and supporting ambitious climate policy;
- establishing robust governance procedures on climate lobbying;
- acting when it is determined that the lobbying activities of either the company or one of its trade associations are not aligned with ambitious climate policies; and
- being transparent about the company’s lobbying activities via appropriate disclosures.
